References Category:1982 software Category:Computer-aided design software Category:AutoDeskQ: How to remove content inside after toggle event and inserting in other way in CSS? I'm trying to create a box, with an on-click event, that shows the content in a section element, and then hides that content, and shows the on-click content in that element. So far, I can make the content appear, but I'm unable to get the content to go away once the user clicks elsewhere, nor can I get the content to appear on click. Here's what I've got so far: 

```
function toggle(e) { var target = e.target; if (target.tagName == "LI") { if (target.classList.contains("on")) { target.classList.remove("on"); } else { target.classList.add("on"); } } } .box { width: 250px; height: 200px; background-color: #ccc; border: 1px solid #000; border-radius: 10px; padding: 10px; text-align: center; } .on { background-color: #0099cc; }

HTML and ActiveX design tools: (Customization) Access to the HTML design tools used in the online user interface for editing the 3D model of the drawing directly in a web browser. Data exchange An XREF file is a file format for exchange of information between AutoCAD Torrent Download and other programs. It is a binary file, the main idea being that it is a collection of blocks of information. This allows files to be exchanged between applications that don't directly support the XREF format. AutoLISP supports the definition of XREF files using the xref function. XREF format: (In AutoCAD/Map3D) is a format used to save certain pieces of information about the model and the model's parts to a file. The format also supports binary file compression for saving storage space. Data exchange uses the XREF format. AutoCAD supports a number of XREF formats, including: XREF 9.1 - XREF 9.1 is an XREF file format that includes extensions to the base XREF 9.0 format. The format has also undergone some revisions. XREF 9.0 - XREF 9.0 was the original XREF file format. It supports both XREF binary data compression and human readable XREF files. XREF Dimensional - XREF Dimensional is the extension to XREF 9.0 that allows 3D models to be saved in the XREF 9.0 format. Technical architecture AutoCAD is a BDE-based application, using classes and windows of the base application AutoCAD for these components. This structure is made by a component-based programming technology called ObjectARX, which extends AutoCAD's architecture. ObjectARX runs on top of the Windows and.NET operating systems, which allows it to be run on a variety of computer platforms and languages. The external shapes in the model are represented by collections of objects of the class.NET Shape object, also called entities. A shape is defined by the class.NET Entity ca3bfb1094
