What's new in Modern Tales: Age Of Invention:

Review Introduction The perfect street vehicle. I'm talking about the coupe/stretch version of the Ford Focus for those who can afford it. What could be better than a Focus? It's small enough to park in an isolated location (assuming you don't mind larger vehicles or off-roading capability), it can get you anywhere quickly, and it's compact, so there's less chance of being hurt by things like large rocks or other undercarriage debris. The over-spined version of the Focus ST is the only way to go. Now, the regular Focus models also come in hatchback form, making them perfect for crosstown traffic, but they lack a suspension, so they're not ideal for driving on rough terrain. Years ago, I tried driving a GTS hatchback from the 1990s, and loved it. But I felt the steering wheel would always pull toward the driver, due to its shape. When the Focus ST came along in Europe back in 2008, it was a revelation. The thing came equipped with a stock FI-Reported flat bottomed car with an adjustable suspension. For a fraction of the price of an Audi S4, you could be cruising the roads. It was like an SUV, in a small, affordable shell. The Focus I have for review today is the second generation of the ST from a dealership in Pennsylvania. Like the European model, the US market Focus ST comes with power of a whopping 300Whp, courtesy of the same 3.5L twin-turbo V6. Heck, for the price of the Focus, a nice car like a Honda Civic, a roomy interior, and a little hatchback, you've got a viable daily driver. The differences between the various generations of this car (or, rather, cars) are only cosmetic. For instance, this one is equipped with the special "no regrets" alloy wheels, offering 17" alloys in the front and 17" alloys with 225/60s in the rear. This car's suspension has been better

smoothed out since my last test drive, with improved damping and less body roll. Also, the car came with new tires, making it even better off-roading than previously. At the time of this review, the tires are only two months old, giving the car a more nervous feel. On the inside,

Oneirogen is a circular journey through the developer's subconscious. Inspired by the writings of Carl Jung and Joseph Campbell, this surreal experience was made for room scale VR from the ground up. Flow from one environment to the next as you experience a magical trip through mysterious realms. Spend as long as you like in each scene, there are no timers or scores. No UI or menus. (Great for showing to newcomers to VR or gaming) No teleportation. Built with a 3mx3m space in mind. Find the 4 hidden tokens to unlock minigames in the starting room. The charm of this game is very basic. You step into a new environment and you have no way of knowing what you will encounter or what it means. This is a popular forum game, don't expect content, just see what happens. About the Creator: Dusty Gnome is a VR developer and artist. He loves building and making games and experiences. He is currently working on a very much more immersive version of Oneirogen in early access for release in October. Oneirogen has been in development since 2016 and the early version is very much a proof of concept. With a little more time and more polish it will be a great, long-lasting experience. Game tags: japanese-depression, journey, room scale, sense, room scale, VR, VR and depression, oneirogen, visual novel, space VR, round-the-house, VR and the 60s How to play: Hop in your virtual seat and enjoy the ride. Step in and out of room at will. You can also use your thumb stick or touch pad as a controller to use the space. Full Room Scale: In the room scale player, you control the exact motion and position you are in. This is

how the game was built to play and is perhaps the only way to fully experience the game. Room Scale is full room scale, not on some smaller scale, similar to a VR arcade, or the cheaper Vive. Standard Room Scale: In standard room scale the headset is calibrated around the corners of your space. This means you do not really have anywhere to walk around since the distance of the walls limits where you can go and the boundaries of the space constrain the player to stay in the most active portions of the space. If you use the smaller limits of the corners the space seems too
