The meeting will be held at 9 a.m. on the school grounds.

0cc13bf012

I need to split this text into a number of different fields. Below I list all the different string patterns, I need to match. it can be one of the following examples: 83x01123 Quimica de Chang/SOLUCIONARIO Quimica (12a Edicion) Quimica, 7ma Edici3n Quimica & Solucionario Quimica (12a Edicion) quimica 7 edicion. this is a simple test pattern. I have the following so far:

```
rtrim(str_extract('83x01123'))
```

```
rtrim(str_extract('Quimica de
```

```
Chang/SOLUCIONARIO Quimica (12a Edicion)'))
```

```
rtrim(str_extract('Quimica, 7ma Edici3n'))); but I
```

cant get it working right. It stops at the first match and I am unsure how to then get the rest of the text that was matched. Any help would be

appreciated. A: UPDATE: After updating my regex, I can tell you that you can only have one parenthesis or other brackets. Also, I can't get rid of the leading 83x, so if I can help you further, let me know. I'm still working on my own regex, so I'm not totally sure what you need. If you want to use R trims as already suggested, you would do something like this:

```
rtrim(str_extract_all('83x01123',  
'^\D*(?=\d*x\d*)(?:\D*(?:\S*(?)
```
