a software package can also automatically install and update your graphics adapter drivers. the package for windows 10 is called windows 10 anniversary update windows 10 anniversary update and the package for windows 7, windows 8 and windows 8.1 is called

windows 7 windows 8. a hardware problem can also cause the display adapter to be disabled. this can be caused by a faulty graphics adapter, a defective or incompatible motherboard, or a damaged power supply. a motherboard that has no video output ports and a broken video card can cause the system to display a message on the screen saying that the driver for the video card is not installed. the only solution is to replace the motherboard, or, if you have spare video cards, to install the missing video card in the motherboard. i was under the impression that sysprep /generalize /oobe would force windows to look in it's driver store when the image was being applied. though the ati driver is clearly in the driver store, windows ignores it. when the build completes, i go in the device manager right click the standard vga under display and perform a search automatically for updated driver software which then installs the ati driver no problem. all graphics adapters have the same basic capabilities. they all have a turbo setting. this is intended to boost graphics performance to get more frames per second and thus give you an edge over the other players. however, when youre using pci-e video cards, this is usually pointless. the reason is that most modern games use the gpu to render graphics, not the cpu. so, turbo doesnt add any benefit. however, if youre using a agp video card, this setting will speed up your game, especially if youre running full-screen games. 5ec8ef588b
